Prompt

generate an image of a UI design for a smart hmoe application. it will include parts like a top-down floor plan of a house or company building in which a user will be able to create rooms and add given devices to these rooms in order to take full control over them.

(Chatgtp GPT-4o)

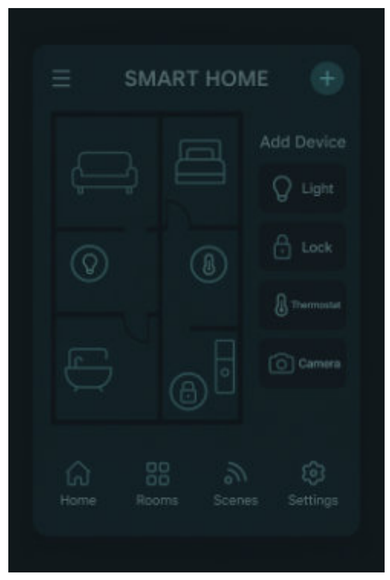

Prompt

(Extra prompt after initial prompt above)

make the UI look more professional and a bit more advanced it's a bit simple to my liking. I'll be implementing using MaterialUI butyou may switch around the color scheme to anything fitting.

(Chatgtp GPT-4o)

Personal taughts

The model provided a clean UI basd on my rather small explanation fo the project.

It worked out a rather simple UI in my opinion but it shows a possibleway to organize the different tabs etc.

I did expect the extra follow up prompt to make greather impact which it clearly didn't.

Prompt (identical to the initial prompt before)

generate an image of a UI design for a smart hmoe application. it will include parts like a top-down floor plan of a house or company building in which a user will be able to create rooms and add given devices to these rooms in order to take full control over them.

(Perplexity Pro Labs)

(Extra prompt after initial prompt above)

The ui is realy full and cluttered. I want a nice and clean UI that enables the users to take control in an easy maner over their smart home. I'll be building the implementation with Material UI , but feel free to switch out the color scheme.

(Perplexity Pro Labs)

Personal taughts

The labs model of perplexity pro initialy provided a cluttered UI which feels verry unpratical. After the revision it showed a cleaner version with a similar approach. I like the 'card' seperation which littarly creates a grid on which everything fits. The 3D model that is "oveflowwing" the grid is a nice add on and gives it depth. Which is something I'll keep in mind if i'd choose for the 3D extra of the project.

Perplexity clearly provided me with a different look onto the project with a more complex interpretation of the task.
